1. Introduction

Ministry of Education of Ethiopia has announced the implementation of exit exam for all undergraduate program students (public and private), beginning with the 2022/2023 academic year, in order to improve the quality of graduates produced by higher learning institutions. The exit exam aimed at checking whether students have acquired the required knowledge, skills and attitudes or not. To implement this it require determining competency areas for a specific program ,which is already completed, and construction of tests based on the competency areas prepared.

Planning of a test is the first and vital step in the construction of an achievement test. In order to achieve the valid and reliable measurement of student learning and program learning outcomes, the development of valid and reliable test is the mandatory. Test should be able to measure student performance in all dimensions of knowledge, skill and attitude. The carefully planned test construction contributes to improve the overall quality of the test in terms of test content validity, difficulty level, discrimination power and test reliability. Test construction needs the preparation of test blue print which is a complete plan that explains how to develop a test. The term refers to a map or specification of assessment to ensure that all aspects of the curriculum and educational domains are covered by the assessment programs over a specified period of time. It helps curriculum developers/test constructors to match various competencies with the course content and the appropriate modality of assessment.

Generally, test blueprint will help to appropriately assess the achievement of instructional objectives of the course; reflect key course goals, objectives and the material learned or covered during the instruction period; and to include the appropriate item formats along with the knowledge, skill and attitude being assessed.

Keeping this in mind, the team has prepared this test blueprint document in order to help the test developers or content specialists in their process of valid and reliable test construction. The major points considered in the process of preparing this test blue print guideline were the core competencies that have been already identified for the themes of courses, the course contents, course credit hours, and the learning outcomes with their corresponding levels of achievement by learning domains.

2. Objective and Significance of Test Blueprint Preparation

2.1. Objective of Test Blueprint Preparation

Test blue print preparation is generally done to assist the preparation of a test that is representative, broadly sampled, and consisting of complete learning domains expected of the Ethiopian higher education students on completion of their study program.

The specific objectives of test blueprint are to:

- Facilitate the construction of a representative and balanced test items for the selected courses in accordance with the competencies identified.
- Guide test developers or writers to write or set appropriate test items.

2.2. Significance of Test Blueprint Preparation

The test blueprint will help to ensure that the tests appropriately assess the instructional objectives of the course; reflect key course goals and objectives and to include the appropriate item formats for the skills being assessed.

Additionally the test blueprint can be used by the students as a study guide; to facilitate learning by providing a framework or mental schema for students and to communicate course expectations to stakeholders like schools and others.

3. Expected Profile of the Graduates

Upon completion of the B.Sc. nursing program, the graduates will be able to accomplish the following core competencies:

Knowledge

1. Apply the concepts and models of disease prevention and health promotion in health care service provision.
2. Analyze, interpret and use health and health-related indicators.
3. Apply principles of public emergency and disaster management.
4. Diagnose the client's health needs and responses to the actual or potential health conditions
5. Plan appropriate independent and collaborative nursing interventions.
6. Identify and manage client problems, responses, potential complications, and collaborative problems of clients
7. Guide, counsel, and teach clients based on their need in all health settings including the community
8. Apply informatics and technology for health data management and patient care
9. Utilize evidences for patient health care services

10. Maintain and practice updated nursing care standards
11. Diagnose and manage communicable and non-communicable diseases

Skill

1. Apply methods of nutritional assessment, interpret results and provide nutritional counseling and education
2. Provide basic holistic care for individuals, families, and communities at large of all age groups in a variety of health care settings, using the nursing process as a framework
3. Conduct complete patent assessment using nursing process/other relevant tools to identify holistic health needs and the response of the client
4. Perform basic nursing procedures correctly and independently
5. Perform advanced nursing procedures, assist advanced diagnostic and therapeutic procedures using the latest evidence
6. Perform preventive, promotive, curative, and rehabilitative care for clients
7. Record, document and report patient and health related data
8. Perform activities in prevention (including counseling), control, and management of emerging and re-emerging communicable and non-communicable diseases
9. Provide comprehensive maternal and child health care services
10. Assess and manage clients with special needs
11. Provide comprehensive mental health nursing care
12. Manage common emergency and acute health problems
13. Practice effective therapeutic communication
14. Exercise leadership and involve in the management of the health care system
15. Provide community health nursing services
16. Maintain personal effectiveness and engage in continuous professional development
17. Be nurse educator

Attitude

1. Use critical thinking to analyze and interpret health data collected, by using the functional health pattern (Gordon's) /other recent evidence, to establish priorities and make the appropriate decision

2. Work collaboratively and effectively with other health workers in the care of clients in all health care settings and community health care team
3. Apply professional, ethical, and legal standards and codes in nursing practice
4. Implement quality improvement measures and maintain a safe patient environment

4. General Objective

To prepare competent graduate nurses who can:

- ✓ Provide high-quality comprehensive nursing care ethically and professionally at the individual, family, and community levels and various healthcare settings
- ✓ Manage common communicable and non-communicable diseases
- ✓ Manage common MCH, RH, emergency, and mental health problems
- ✓ Promote and prevent disease in individuals, family and community levels at all levels of healthcare settings
- ✓ Lead and manage nursing care services
- ✓ Engage in nursing education, research, and advocacy that will improve the nursing profession and services

5. Specific Objectives

- ✧ Apply the concepts and models of disease prevention and health promotion
- ✧ Apply methods of nutritional assessment, interpret results and provide nutritional counseling and education
- ✧ Demonstrate the ability to promote the health of populations by influencing lifestyle, nutrition, and socio-economic, physical, and cultural environment through methods of health promotion, including health education, directed towards populations, communities, and individuals
- ✧ Apply principles of diversity and provide culturally relevant service to all age groups
- ✧ Perform holistic nursing practices about current patient care information, professional practice standards, guidelines, rules, and regulations
- ✧ Provide a rationale for decisions and actions in matters related to the provision of care for clients
- ✧ Manage teamwork and collaborative performances across an array of functions
- ✧ Apply evidence-based nursing knowledge in the provision of care for the client

- ✧ Document accurately and timely relevant health care data to ensure patient safety and improve health outcome
- ✧ Serve as a role model, change agent, teacher, and mentor in their professional life
- ✧ Participate in ethical decision-making within the multidisciplinary team
- ✧ Take responsibility and accountability for own decisions, actions, or omissions in nursing care delivery
- ✧ Adhere to all relevant ethical codes of conduct and standards set by the profession, including, but not limited to, confidentiality, privacy, and respect for the dignity
- ✧ Advocate for maintaining a standard of care and evidence-based practice
- ✧ Protect clients from incompetent, unethical, or illegal healthcare practices, and unconsented research endeavors
- ✧ Maintain patients' bill of rights throughout nursing care service including, but not limited to, guidance informed choice, and consent
- ✧ Apply compassionate and respectful nursing care
- ✧ Practices within a prescribed legal framework relevant to own practice, including but not limited to, the Constitution, the Children's Act, Nursing Act, National Health Act Report any malpractices, tort, and criminal acts to the responsible body
- ✧ Assess, diagnose, plan and manage client problems, and evaluate outcomes using the nursing process as a framework
- ✧ Anticipate and manage potential complications and collaborative problems of clients
- ✧ Manage common emergency, acute & chronic health problems accordingly
- ✧ Perform basic nursing procedures correctly and independently
- ✧ Assist advanced diagnostic and therapeutic procedures applied for clients undergoing medical or surgical care
- ✧ Perform preventive, promotive, curative, and rehabilitative care for clients in all age groups
- ✧ Provide holistic maternal, newborn, child, adolescent, and geriatric care
- ✧ Take history and collects relevant health data from clients or significant others
- ✧ Performs comprehensive physical examinations to identify physical, mental, or emotional problems of the client
- ✧ Analyze and interpret health data through the functional health pattern (Gordon's) approach
- ✧ Documents and report findings with the patient, the patient family (when appropriate), and the multidisciplinary team promptly

- ✧ Work collaboratively with other health workers to help solicit client information
- ✧ Analyses and utilizes assessment information to make a clinical judgment about the clients' status and responses to actual or potential health conditions.
- ✧ Utilizes expert knowledge to interpret results of screenings and diagnostic investigations performed
- ✧ Formulates nursing and/or medical diagnosis
- ✧ Make prioritization of clients' problem
- ✧ Identify and document expected outcomes and goals
- ✧ Develop a prioritized plan of care that includes interventions and alternatives to attain expected outcomes for the client
- ✧ Reviews and revises the plan with the client, the client's family, and the multidisciplinary team
- ✧ Considers economic, social, religious, cultural, and environmental conditions of the clients during the designing of the nursing plan of care
- ✧ Implements the interventions identified in the plan of care in-line with evidence-based nursing practice
- ✧ Collaborates with nursing colleagues and other members of the healthcare team to implement the plan of care
- ✧ Implement the plan of care with efficient utilization of resources
- ✧ Integrates principles of safety and quality into interventions
- ✧ Documents implementation of the identified plan accordingly
- ✧ Evaluate patient outcomes against stated goals and outcome criteria
- ✧ Monitor progress of client status and adjust nursing care plan accordingly
- ✧ Collaborate with clients, their families, and the healthcare team in the evaluation process
- ✧ Document all processes and outcomes, and keep them confidential
- ✧ Communicate effectively both verbally and/or non-verbally in the patient care environment
- ✧ Practice proper recording and documentation of patient care-related information and other relevant data produced in their practice environment
- ✧ Demonstrate effective communication with clients/patients, their families, the health care team, and the community at large
- ✧ Forge seamless collaboration and partnership with people within and outside of the health organizations

- ✧ Utilize information, education, and communication (IEC) and behavior change communication (BCC) materials for proper communication and education of clients
- ✧ Apply therapeutic communication skills in the management of client
- ✧ Communicate appropriately in special circumstances and sensitive issues
- ✧ Provide counseling services for clients based on their scope
- ✧ Employ continuous and sustainable quality improvement mechanisms to improve client outcomes and transform future nursing practices
- ✧ Take responsibility for managing and leading health programs at all levels of the managerial hierarchy
- ✧ Play a team lead role and model professionalism to peers and other colleagues in the public health landscape
- ✧ Manage time and resources effectively and efficiently to ensure the nursing quality of care is maintained and the client's outcome improved
- ✧ Apply principles of leadership in the management of clinical care and utilization of resources
- ✧ Advocate for a safe working environment for nursing and medical care provision
- ✧ Participate in the development and implementation of standards, practice guidelines, policies, and protocol
- ✧ Apply management and leadership theories in the execution of nursing care and delegation of responsibilities
- ✧ Attain continuous professional and personal development
- ✧ Search, collect, organize and interpret health and biomedical information from different databases
- ✧ Retrieve and use patient-specific information from a clinical data system by maintaining confidentiality and protection of individual data
- ✧ Formulate hypotheses, collect and critically evaluate data to find a solution for the problems, and disseminate findings.
- ✧ Identify knowledge and performance gaps that can be solved by using systematic methods
- ✧ Use information technology and application systems to manage research data and navigate to access online information and literature
- ✧ Advocate for keeping patients' rights during research activities
- ✧ Utilize updated nursing research findings for evidence-based nursing practice and quality improvement interventions

- ✧ Participate in critical appraisal of research findings and scholarly activities
- ✧ Acquires current knowledge and skills that reflect evidence-based practice and applies them appropriately in a practice setting
- ✧ Evaluates own nursing knowledge and practice about current patient care information professional practice standards, guidelines, and rules and regulations
- ✧ Possess professional excellence and competence through continuing education and lifelong learning
- ✧ Apply principles of teaching, learning, and evaluation to design educational programs that enhance the knowledge and practice of staff in the different care unit
- ✧ Participates in formal and informal education of others
- ✧ Teach nursing students at college, university, and health facility level
- ✧ Involve in curriculum design and implementation process
- ✧ Demonstrate pedagogic skills in education, and assessment
- ✧ Promote professionalism and continuous professional development
- ✧ Demonstrates commitment to the personal and professional development of self and others.

management Share = 5.66% items from the total														
Health Promotion and disease prevention Share = 4.04% items from the total	1. HPDP		5	5/5=1	1*4.04=4.04%		-	1	0.5	0.53	1	1.01	-	4.04%
Total for the program			123.65		100%									100%

Note: The number of items assigned in the levels of domains is based on the nature of learning outcomes/objectives.

7. Conclusion

Exit examination can have a vital role in producing knowledgeable, skillful and attitudinally matured graduates. It contributes to prepare competent graduates as it can serve as a quality check for effectiveness. It also helps in improving academic programs quality and effectiveness. Furthermore, it can create the platform for cooperation among academic programs at different universities to work jointly to improve the programs quality.

In view of this, this document is produced to assist the setting of the exit examinations for BSc in comprehensive nursing program, which is being delivered by Ministry of Education. To meet the graduation profile, competency and learning outcome, exit exam competency selection and identifying core course was done for 2015 EC graduating students. As a result, preparing test blueprint is necessary to prepare fairly distributed items based on the above criteria.
