

1. Ulcerative colitis usually begins in

A. Rectum

B. Sigmoid

C. Cecum

2. Ultra short acting phenobarbitals

A.

3. drug which increases positive inotropic effect blocking PDE_3

4. Which one has positive inotropic effect

A. Cardiac glycosides

B. Furosemide

5. Pectoral girdle is formed by

A. Clavicle and scapula

B. Ischium, iliac and pubic

6. Not true about upper limb vasculature

A.

7. diagnosed with LCISbilateral

8. 2nd contraction of esophagus is at the level as it is crossed by

A. Left bronchus

B. Right bronchus

C. Aorta

9. Basic amino acid

A. Tyrosine and tryptophan

B. Arginine and histidine

10. which LDH is prominent in heart

A. LDH 1

B. LDH 4

C. LDH 2

D. LDH 3

11. The microorganism is inoculated in both Blood and Charcoal agar but it grows on the latter what is the microorganism

A. *Klebsellia pneumoniae*

B. *Listeria Monocytogens*

12. Gastric embryology

13. common cause of brain emboli

A.

14. A girl with breast and palpable mass in the labia majora

15. Genetic disorder with increased intensity and decrease onset time

A. Trinucleotide repeat mutation

B. Mitochondrial mutation

C. Multifactorial condition

16. Diplococci gram negative bacteria

A. *N. Gonorrhea*

B. *H. Influenza*

C.

17. Clustered cyst in bal

18. Piperazine antagonise which drug's activity

A. Metronidazole

B. Pyrantel pamoate

C. Quinidine

19. Cd 30 is marker for

A. Seminoma

B. Hodgkin lymphoma

C. Non hodgkin lymphoma

20. Path of bile

A. Liver>gallbladder >duodenum>small intestine>large intestine>liver

B. Gallbladder>liver>duodenum>rectum

21. Diabetic patient with left face problem

A. Facial nerve palsy

22. liquefactive necrosis of brain

23. Which immunoglobulin is seen in high amount during parasitic infection

A. IgG

B. IgE

C. IgA

24. In fetal period heart uses which structure as a shunt

A. Ductus venosus

B. Ductus arteriosus

C. Fossa ovalis

D. All

25. Which of the following is used to convert glucose to glycogen

A. ATP

26. 180/110 in coma med given

27. Aschoff bodies are seen in

A. Rheumatic disease

B.

28. Which part has the greater surface area in the somatosensory region of the brain

A. Upper lip

B. Lower lip

C. Hands

29. Rpgn the cresentric mass if formed by

30. Recognizing symbols is done by which broadman area

A.18

B. 39

C. 44

31. Which one is one the maternal side

32. Starting from primary oocyte the first phase of meiosis end with

A. 2 daughter cells and 1 polar body

B. 4 daughter cells and 2 polar body

33. Acute urinary retention is caused by

A. Benign prostatic hyperplasia

B. Bladder cancer

34. Bcr/abl

35. True about histology of heart

36. Not true about osteoid osteoma

A. It is Benign tumor

B. Doesn't respond to NSAID

37. Not true abt bone carcinomas.....

A. chondroma is bone forming tumor

38. How brain recognise the intensity of sound

39. Not found in inner nuclear layer

A. Cell bodies of horizontal cells

B. Bipolar cells

C. Melsu

40. Where is brunner gland found

A. Esophagus

B. Duodenum

C. Stomach

41. rota true is

42. Marfan syndrome different from homocysteinuria

A. Aortic root Aneurysm

B. Skeletal abnormality

C. Archadactyl

D. Thromboembolism

43. Vpl

44. Gultamate-nmda

45. Major virulence factor responsible for paralysis in tetanus is

A. Tetanospasmin

B. Tetanus toxin

46. Lambert eaton

47. Urachus

48. Good pasture

49. Rennin

50. not True about the relationship between actinomyces and polymicrobial infection

A. Aerobes increase the oxygen tension

B. Aerobes increase the formation of capsule and toxin

C. Actinomyces destroy the mucosal membrane so that other bacterias grow

51. Which one is true as altitude increase

A. Amount of oxygen decrease

B. Partial pressure of oxygen decrease

C. Amount of RBC decrease

52. True about 2,3bp

A. Cause the Hb dissociation curve to shift rightwards

B. Is useful when oxygen requirement is high

53. Smoking causing tb

54. False abt tuberculun and ppd

55. Which one is the most common Extra pulmonary tb infection

A. Tb osteomyelitis

B. Tb salpingitis

C. Tb meningitis

56. Broncheal tree sm

57. Inhalational exposure

58. Atp

59. During thoracic trauma Abdominal pain is referred by

A. T7- t11

60. Deficiency of complement c5-c9 will make us susceptible to

A. N. Meningitidis

B. H. Influenza

C.

61. Which drug require inhibition of thymidylate synthase fir its function

A. 5- flurouracil

62. Heparin then warfarin purpura....thrombi

63. Predisone for weeks tapered then inhaled fluticasone

64. Affected when surgical neck of humerus is fractured

A. Musclucutaneous n

B. Axillary n

C. Ulnar n

D. Radial n

E. Median n

65. Not True about Thymus gland embryology

A. Continues to grow until puberty then it gets smaller

B.

66.

.

.

.

78. fever, meningitis which is raised

A. neutrophil

B. Eosinophil

C. Lymphocytes

79. trophozoite stage

80. Decreasing the angle is what kind of movement

A. Flexion

B. Extension

C. Inversion

81. intrusion of gamma

82. function of gamma

83. burkit lymphoma.....ig enhancer

84. caffeine

85. botulin.....neurotoxin

86. urine acidification is used for.....aspirin

87. why elderly are prone to cancer

A. Due to accumulation of mutation

B. Because their immune system is weakened

88. not behavior of cancer cell

A. Invade apoptosis

B. Invade necrosis

C. Uncontrolled proliferation

89. corona.....culture or media

90. alpha 1 major role

A. vasoconstriction

B. Bronchodilation

C. Vasodilation

91. Which one is used to convert DHT to testosterone

A. 5 alpha reductase 2

B. 5 alpha reductase 1

92. which one of the following is false

a. chromophobe-acth

b. lactotrophs- prolactin

c. somatotrophs- somatomedin

d. Gonadotroph- FSH

93. Which one is not characteristics of asthma

A. alveolar dilation

B. Airway hyperresponsiveness

94. pgi sizer.....

A. vasoconstriction

B. Platelet aggregation

95. 3rd arch derivative...

A. glossopharyngeal.n

B. Facial.n

96. parietal pleura extend upto which rib along the mid axillary line

A. Rib 6

B. Rib 8

C. Rib 10

D. Rib 12

97. quadratus lumborum extend posteriorly to form

A. lat lig

B. Arcuate line

C. Rectus sheath

98. Which one result in increased GFR

A. afferent dilation

B. Efferent dilation

99. trabeculated

100. major blood supply of interventricular septum

A. Descending coronary artery

A. Ascending coronary artery

101. Mismatched embryological Origin

a. medulla - neural crest

b. cortex- ectoderm

c. pineal-neural ectoderm

d. Thyroid gland- ectoderm

102. true

a. qrs-vent dep

b. exercise- st segment mesfat

c.

103. Which one is false

a. neuro receptor only found in post synaptic membrane

b. neuropeptide are made in presynaptic neuron

c. metabolites come anterograde

d.

104. depolarizing neuromuscular blockers

105. therapeutic index is measure of

A. safety of a drug

B. Potency of a drug

106. True about first order reaction

A. Its half life depend on rate of administration

B. Doesn't depend on the concentration at all

107. atherosclerosis.....defective ldl

108. atherosclerosis damage to

A. endothelial cell

B. Intima

109. primitive streak remnant.....sacrocaudal teratoma

110. celecoxib.....prostaglandin inhibition in kidney

111. which of the following c\s of rbc is less suitable for o2 transport

A. It being disk shaped makes it able to accommodate more

B. Abnormal shape

112. false

a.normal protien

b. trandunt protien

c. gene not connected to

113. When the neck of fibula is fractured which one is more susceptible

A. common fibullar nerve

114. superior gluteal nerve

115, common cause of septic arthritis

A. s.aureus

116. common meningitis in child and adult respectively

A. S. and N. Meningitidis

117. hbv super infected with hdv

118. morphine functional damage

A. Peptic ulcer

B. Respiratory failure

C.

119. acute urinary retention.....

120. All are primarily bactericidal except

A. aminoglicoside

B. Pencillin

C.

121. amylopectin end degradation product

A. glucose

122. yetedegeme.brochial tree all sm

123. which one of the following increase ph when inhibited

A. parietal cell

B. Gastric cell

C. Secretin

124. Which drug is mismatched with its primary activity area

a. osmotic -glomerulus

b. thiazide- early proximal tubule

c-loop diuretic - distal convoluted tubule

125. not bipotential

A.

126 not true

a . female-para

b-male-meso

c. testestrone-para

127. Hormone responsible for milk production

A. prolactin

B. Oxytocin

128. not true about alzieghmer

A. normal microtubule

B.

129. Which one of the following is not correct about rabies virus, its pathogenesis and prevention in humans?

A. Nerve tissue vaccine is the best one

B. The virus travels by retrograde transport to the CNS

C. Risk is greater in children than adults

D. The virus infects the brain tissue before reaching to the saliva

E. The live attenuated vaccines should not be given for humans

130- Vit d is not useful in which

A. Monocyte precursor

B. Cell proliferation

C. Insulin production

131- Which of the ff is not true about HER2

A. HER 2 receptor are seen in the stomach also

B. Indicate aggressive breast cancer

C. Used to determine the prognosis and treatment

132- which one is mismatched with its main virulence factor

A. botu...nuerotoxin

B. Tetanus.....tetanospamn

C. Melsu

133- heart physiology yetedegeme

134. not contraindicated in lopera,imide
