

Module 15 final 2013 batch

1.lymphomas and nasopharyngeal carcinoma

a.EBV

b.CMV

2.not true lassasya virus

a.common in east africa

- vvest

b. 2segment rna

c.

3.a man was presented with painfull ulcer and cocibacillus

a.hemophilus ducreyi

b. syphills

4.Maltese cross present in

a.babisa

5.common Brucella species associcated with humans

A.Brucella mallei

b.Brucella suis

c Brucella canis

6.not true about egra and tst test

7.not true tb

a.tb exposed person will get tb disease Not in every case

8.which of the following is true about tubercloid leprosy

A.a condition of immune anergy

b.Neuronal involvement dominates

9.which of the following is true about Chikungunya virus

• Viremia can reach up to 3.3×10^9 copies/ml in the first week of infection (104 and 106 copies/ml for DENV and ZIKV).

a.viremia greater than dengue and yellow fever in the first week

10.true about yellow fever

hepatorenal failure

Mortality from severe stage (hepatorenal failure) is high ($\geq 20\%$) (Death occurs on day 7–10 of illness).

a. death most common by hepatorenal fever

11. which of the following has dna virus

a. dengue fever

b. monkey pox

c. yellow fever

d. ebola virus

e. zika virus

12. The hallmark of MAC infection

a. HIV is abundant acid-fast bacilli within

macrophages

13. Yersinia pestis

Yersinia pestis is responsible for causing bubonic plague, which is characterized by the formation of painful, enlarged lymph nodes called buboes

a. buboe plague

14. paroxysms of violent coughing followed by

a loud inspiratory "whoop."

a. pertusis

15. beaded appearance seen in

a. nocardia

They appear "beaded" with alternating Gram-positive and Gram-negative sections of the same filament.

16. most common type of anthrax

a. inhalational

b. cutaneous

17. ulceration in oral cavity around the salivary duct

a. koplic

a. warthins

18. intra nuclear inclusion with glassy appearance with vesicles and multinucleated cells appearance seen in

a. HSV

b.HPV

19.auto infection seen in

a.s.stronglidies

20. not true about oncocercosis

a.microfilarae is nocturnal

21. not true about diptera

a,

22. viruses cause

pattern of inflammatory response

a.Cytopathic-Cytoproliferative

23. which of the following is emerging disease

A. western equine encephalitis,
 It is not newly emerging
 It has been identified since 1930's

24. not true about hanta virus

a. common in east africa

b. severe in pregnant woman

c. 2 nucleic acid segment

3

d

25. not true about hanta virus

a. it is a remerging virus

b. 3 segment of nucleic acid

c. aerosal transmission

26. not true about ebola virus

all = T

a. Fruit bats are a major cause of the
transmission

b. transmsion via BODY FLUIDS

and semen

c.bleeding from internal and external

d.

27. true about var.capasulatum

a.commonly causes pulmonary disease

28.which of the following doesn't cause mucocutaneous leishmaniasis

a.l.dovani

b.

29.PARACOCCIDIOIDOMYCOSIS

a.multiply budding yeasts;

b.budding yeasts attached by broad base

30.tuberculate chlamydospore in

a.histoplasma capsulatum also known as macroconidia

31.Chagas disease intermediate phase characterized by

a.asymptomatic phase

32.diagnosis stage of chagas disease in human

a.amastigote, trypomastigote

b.amastigote, epimastigote

c

33.while drug classification one mechanism is not applied

a.drugs adverse effect

34.tb drug that is used to treat staph infection

a.rifampin

b.acyclovir

35.not true about toxoplasmosis

a.humans shed oocyst in feces

Acute Phase

- active infection
- 1-4 months duration
- most are asymptomatic (children most likely to be symptomatic)

Indeterminate Phase

- 10-30 years of latency
- relatively asymptomatic with no detectable parasitemia
- seropositive

Chronic Phase

- 10-30% of infected exhibit cardiomyopathy or megasyndromes

Humans are IH
Cats DH -hence oocyst production takes place in them

36. longest acting sulfonamides

Sulfadoxine

Combination with clavulanic (Beta-lactamase inhibitor) acid preparations have broader spectrum of activity than beta-lactamase labile penicillins when given alone.

37. In how do we combine clavulanic combined with ampicillin

Carbenicillin, piperacillin, azlocillin, ticarcillin are termed as antipseudomonal penicillins

38. example of antipseudomonal penicillin

39. which of the following is not beta lactam drug

a. linezolid

it is protein synthesis (50 S) inhibitor. (oxazolidinones)

40. Ritonavir given with other drug why is that

ritonavir is one of protease inhibitor and it used as booster of other PIs and increases the bioavailability (CYP3A inhibitor)

41. which drug needs to be taken with fat

a. Griseofulvin

anti fungal drug -to improve absorption

42. which of the following is a bactericidal drug

a. aminoglycoside

b. macrolides

c. tetracycline

43. ciprofloxacin moa

Quinolones/FQs block bacterial DNA synthesis by inhibiting bacterial topoisomerase II (DNA gyrase) and topoisomerase IV

44. which of the following drugs can't be taken with zidovudine due to their adverse effect

Both stavudine and ribavirin are activated by the same intracellular pathways and should not be given with AZT.

45. primary keratoconjunctivitis and recurrent keratitis.

a. Trifluridine

46. active against HSV1 but its use limited to immunocompromised patients with herpetic

and vaccinia keratitis and in HSV keratoconjunctivitis

a. Vidarabine

b. Rimantadine

47. HCV virus treatment with flu like symptoms

a. interferons

48. which of the following used in UTI

A. nitrofurantoin

49. which of the following drug is used in acute p. vivax and falciparum

a.chloroquinmene

50,which of the following is true teblo malarial drugs paired with their moa

51 hyperurcemia pllus hepatotoxicty from tb drugs

a.py... **Pyrazinamide**

52 which drug is classified under group 4 cephalosporin

a. **Cefepime , cefpirome**

53.how does primaquine brings hemolysis and hemolytic anemia in patients with G6PD defeicny

Praziquantel and piperazil lay there was a question abt their moa which is true mnamn eyale

54.position of the mosquito

a.45 degree....

55.which of the following fly mechanism applied to prevent vector by sterilizing the male

a.tsetse fly

56: spotted depigmentation of skin may be hypo to

hyper pigmented

a.leopard skin

b,sowda

57.which one will lead to onchocerca blindness

a.Punctate keratitis

b.Sclerosing keratitis

58.which of the following is not transmitted b metacercaie

a.s.hematobium

b.

59.inermidiate host of E.granulosus(not sure tho ynur aynur)

a.sheep

60.which of the ff is true about blood films

a.thin film used for quantification

61.not true about t.spiralis

a.human shed embronated egg to the eenv't
